

Company DPD + incentive — request, ship, verify

Admin prod: <https://dpdadmin-prod.vercel.app> · App branch: `vk-dev` commit `6e7b0ab` · Play: **do not publish** until explicit approval · DB: `20261030600000` + `20261030800000` on `eoksxkdssptgyqyywdju`

0. Builds and access

Surface	Where	Who	Ready?
Admin Companies UI	<code>/en/settings/source-companies</code>	<code>companies.view</code> / <code>companies.edit</code> (or super admin)	Yes — Vercel prod aliased
Payout / Daily DPD / extra earnings RPC	Production Postgres	Any rider session hitting extra earnings / home	Yes — 308 applied
Rider Home + Extra Earnings UI	MG-GO <code>vk-dev</code>	Test APK / sideload only	Code yes · Play no

Production Play APK will still hide `company_scheme` and keep restaurant quests. QA of User screens **must** use a build that includes `6e7b0ab` (company scheme card + Extra Earnings branch). Do not file “app still shows quests” against Play until that build is installed.

1. What the client requested

- Per-company DPD target for **outsourced** riders.
- Flat above/below per-order incentive (not stacked restaurant Extra Earnings quests) when the company scheme is live.
- Option A seed**: Sadeeq ON ($T=15, +0.100 / -0.350$). Every other non-system company incentive OFF from the migration day.
- Unassigned outsourced riders keep **restaurant** behaviour (no invented company scheme).
- In-house (system company MG) never uses the company scheme.
- Payout / remaining / achieved / lock use **verified** counts. Home Daily DPD **numerator** may use submitted progress (`progress_today`).
- Ops can change target, toggle, rates, and `effective_from` in Admin without a code release.

2. What we shipped (map to request)

Request	Shipped	Where to see it
Company DPD target	<code>source_companies.dpd_target</code> + Daily DPD company branch	Admin list DPD column; rider Daily DPD card target
Above / below scheme	<code>compute_source_company_incentive</code> + extra earnings <code>company_scheme</code>	Admin preview table; rider Incentive / Deduction / Net
Sadeeq seed ON	$T=15, +0.100, -0.350$, enabled, <code>effective_from</code> = migration day	Settings → Companies → Sadeeq
Other companies OFF	<code>incentive_enabled</code> = <code>false</code> from migration day	No Scheme badge; riders keep restaurant quests
Hide restaurant quests when scheme live	Home quest card + Extra Earnings list branch on <code>company_scheme != null</code>	User app (vk-dev build)
Verified vs progress	Card display = <code>progress_today ?? completed_today</code> ; <code>remaining/achieved</code> = verified vs target	Home Daily DPD; extra earnings <code>completed_today</code>
Ops self-serve	Companies modal: target, emerald On chip, rates, date, preview	Admin production
Shift-day week counts (same ship)	<code>deliveries.shift_date</code> + Home week COALESCE	Home This week progress; My Deliveries day grouping on new builds

Do not apply leftover migrations `20261028300000` / `284` / `307`. Do not re-push `287`.

3. Gold numbers (Sadeeq) — fail the row if UI disagrees

$T = 15$ · above = 0.100 KD · below = 0.350 KD · round 3 decimals. n = **verified** orders today.

n	Incentive $(n-T) \times 0.100$	Deduction $(T-n) \times 0.350$	Net
30	1.500	0	1.500
21	0.600	0	0.600
15	0	0	0
10	0	1.750	-1.750
5	0	3.500	-3.500
0	0	5.250	-5.250

Admin preview uses the same six n values (30, 21, 15, 10, 5, 0). Rider Net on Extra Earnings must match verified n, not in-transit progress.

4. Verify — Admin

A. List

- ☐ Open Settings → Companies. Permission: without `companies.view` the page is denied.
- ☐ Sadeeq: DPD badge **T 15** + emerald **Scheme**.
- ☐ Other outsourced rows: no Scheme unless a tester already enabled it. System company: lock + DPD “—”.
- ☐ Drivers column is live intake count (in-house counted on MG, outsourced on their company key).
- ☐ Edit is `companies.edit`. Add is `companies.create`. View-only must not save.

B. Sadeeq edit + preview

- ☐ Edit Sadeeq. Scheme chip selected = emerald + check (not pale primary).
- ☐ Preview at 30/21/15/10/5/0 matches the gold table.
- ☐ Change above to 0.200, preview at 21 becomes 1.200; revert before leaving production if this is a live company.
- ☐ Prefer a **throwaway company** for destructive toggle tests.

C. Validation (use a dummy company)

- ☐ Scheme On + blank DPD target → error, no save.
- ☐ Scheme On + blank above or below → error.
- ☐ Scheme On + empty effective-from → error.
- ☐ Scheme Off + blank rates/date → allowed (DPD-only / no scheme).
- ☐ Target 0 or 1.5 → refused.
- ☐ Cannot deactivate a company with active drivers. System company cannot be renamed / deactivated.

D. Effective-from

- ☐ On a dummy company, set scheme On with effective-from = **tomorrow** (Kuwait). Rider extra earnings must still be restaurant quests until that date.
- ☐ Set effective-from = today or past. After save, a rider on that company with vk-dev app sees `company_scheme`.

E. Performance (admin)

- ☐ Performance DPD / Outsource: live company-scheme riders use **company** target, not restaurant `delivery_rules.dpd_target`.
- ☐ In-house riders still use restaurant / zone target.

5. Verify — User (driver app)

Precondition: install vk-dev APK that includes Extra Earnings `company_scheme` parse and `CompanySchemeCard`. Confirm build in About / driver devices if needed.

Prepare four riders (or one rider reassigned between tests):

Rider	Category	Company	Expect Home Extra Earnings
A	Outsourced	Sadeeq (scheme On, date ≤ today)	Company card only — no quests
B	Outsourced	Other company, scheme Off	Restaurant quests (or empty if no rules)
C	Outsourced	Unassigned	Restaurant rules — no company card
D	In-house	MG	Restaurant quests — no company card

Rider A (scheme live)

- ☐ Daily DPD target text = company target (15), not restaurant 10/20/etc.
- ☐ Create pickup (submitted). Card numerator can increase (`progress_today`) while verified stays lower.
- ☐ Remaining / achieved must **not** flip to achieved on progress alone. Need verified $\geq$ target.
- ☐ Home quest area = company name, "Daily target: 15 orders", "Verified today: N", "+ 0.100 KD...", "- 0.350 KD...", three amounts.
- ☐ Tap through to Extra Earnings: same card, no restaurant offer list.
- ☐ Net on the card tracks **verified** N against the gold table (not in-transit count).
- ☐ Arabic locale: target / verified / rate strings render; amounts stay numeric.

Riders B / C / D

- ☐ No company scheme card.
- ☐ Restaurant Extra Earnings / band rows behave as before 308.
- ☐ Daily DPD target from restaurant / zone rule.

6. Sign-off
