

Payroll & Requests — delivery note and SOP verification guide

This pack is for the live module built from your **MGGO Payroll & Requests SOP v1.0** (16 pages) and the HTML prototype. Keep the SOP PDF open while you walk the checklist — every test names the SOP page it proves.

Live URL: <https://dpdadmin-prod.vercel.app/en/payroll> **Date:** 16 September 2026

SOP: MGGO-Payroll-Requests-SOP.pdf · v1.0 **Sign in:** staff account with Payroll access

Contents

1. What we delivered
2. How a day is decided (SOP formulas, live data)
3. Known differences from the SOP / spreadsheet
4. How to verify — open the SOP beside this list
5. Sanity-check numbers (Kuwait, 16 September 2026)
6. Three questions we need from you

Scope. This is a new Admin page under Operations. It does **not** replace Earnings (KWD) or the existing Requests & E-Signature hub. Riders already raise leave / sick / fuel / loan from the driver app — no app update is required for this launch.

1. What we delivered

The monthly spreadsheet is now a live screen. One month at a time, one column per calendar day, with attendance efficiency and a hard link to the request that justifies every OFF / Sick / Accident day.

SOP section	What you asked for	Where it lives
p.3 — Shared	Clear filters, Export to Excel, month selector, seven multi-select slicers (search + All)	Top of both tabs
p.3 — Month	Monthly report only — no date-range picker. Switching the month rebuilds the grid, Fixed Days, day labels and the Requests tab	Exactly three buttons: current Kuwait month + the previous two (e.g. Sep / Aug / Jul 2026)
p.4 — Store	Stores exist only for Americana. Other partners show “No stores for the selected partner”. Riders without a store show as (Pool)	Store slicer + Restaurant column
p.5–7 — Payroll	Five KPI cards, colour-coded day grid, AM ID / MG ID, totals, Fixed Days, uncapped Efficiency %	Payroll tab
p.8 — Efficiency	Fixed Days = calendar days – 2. Efficiency = worked days ÷ Fixed Days × 100, not capped. Approval does not change the %	Row column + KPI “Avg attendance eff.”
p.8 — Justification	OFF / Sick / Accident is unjustified until a matching request is Approved. Absent needs no request. Pending / Under review do not count	KPI “Riders with unjustified days”
p.9–11 — Chart	Five efficiency buckets. Click a bar to filter the table; click again or Show all to clear. Month / filter change resets. Two downloads	Chart + “Download this table” + chart CSV
p.12–15 — Requests	Eight type tiles with a red awaiting badge, status chips, Pending-first queue, Approval Workflow panel	Requests tab. Row opens the existing request record
p.16 — Appendix	Day columns generated from the selected month (real dates, 28 / 30 / 31). Exports follow the on-screen view	Grid headers + CSV files

2. How a day is decided

SOP p.6 names the statuses. SOP p.8 says a non-working day is justified only by an **Approved** request of the matching type for that rider on that exact date. Live data uses Kuwait calendar days.

Priority (first match wins)	Cell	Live source	Approved request required?
1. Day after Kuwait today	blank	—	—
2. Check-in that Kuwait day	12 (grey)	<code>attendance_logs.check_in_at</code>	No. A check-in wins over leave on the same day

Priority (first match wins)	Cell	Live source	Approved request required?
3. Accident cover	Accident (light green)	Leave type Accident, or Sick Leave subtype Accident, covering that date	Yes — Approved or awaiting rider acknowledgement
4. Other sick leave	Sick (orange)	Sick Leave covering that date	Yes
5. Other leave	OFF (green)	Leave covering that date	Yes
6. Otherwise, day ≤ today	Absent (red)	No check-in and no covering request	No — counts against the rider

Which month a request belongs to. SOP p.2 / p.8: the request must match **that same date**, not the day it was filed. The queue and the day grid both use the request's start date → end date. A sick leave filed in September that covers 25–28 August appears in **August**. A leave filed in September that runs 15 November–15 January does **not** appear in September.

Worked day (status 12)

SOP p.6: “Worked a 12-hour shift.” Total Hours on p.7 / p.16 is `count(12) × 12` — a standard shift, not clock hours. Live payroll treats **12** as a Kuwait-day check-in. A rider who clocked in with zero deliveries still shows **12**. Performance’s “working day = verified orders > 0” is a different report and is not used here.

3. Known differences from the SOP / spreadsheet

These are deliberate. They are not defects. Please confirm the three questions in section 6 if you want any of them built later.

SOP / sheet	Live behaviour	Status
Travelled (yellow) — p.6, p.8	No Travel leave exists in the live request catalogue or the driver app. The classifier never paints Travelled. Those days fall through to OFF / Sick / Absent from real data	Omitted
Cancelled (dark red) — “work order cancelled” — p.6	No ops definition of a cancelled work-order day. Cancelled deliveries are not used (that would steal genuine Absent and corrupt the unjustified KPI). No Cancelled column	Omitted
Accident reviewing department = Safety & Legal — p.13	The Approval Workflow panel keeps the SOP wording (step 3). Live Accident rows follow the existing Leave / Sick Leave chains (Reporting Manager / HR / Payroll). The queue’s Reviewing dept. column shows the live step, never a department that does not exist	SOP copy only
Leave reviewing department = Operations — p.13	Live Leave chain is Reporting Manager → HR → Payroll	Live chain
Source Company slicer — p.3, p.16	Reads the field as filled. Blank companies drop out of a company filter. We do not invent a company from an ID	As filled
Riders with no check-in this month	They stay on the roster (Riders in payroll). Past days are Absent, future days blank. This pulls average efficiency down — correct under SOP p.6 Absent	As specified

4. How to verify — open the SOP beside this list

Sign in → Operations → **Payroll & Requests**, or open <https://dpdadmin-prod.vercel.app/en/payroll>. Default tab is Payroll. Default month is the current Kuwait month.

4.1 Shared chrome — SOP pages 3–4

1. Confirm the page title is **Payroll & Requests** and the two tabs are **Payroll** and **Requests**.
2. Count the month buttons: exactly **three** (current + previous two). There is no date-range picker and no older archive.
3. Switch to August, then July. The day headers must change (1-Aug ... 31-Aug , then 1-Jul ...) and the footer must show Fixed Days = month days – 2 (31 → 29, 30 → 28).
4. Confirm the seven slicers: Zone, Partner, Vehicle, Nationality, Source type, Company, Store. Each has search and All.
5. **Store depends on Partner (SOP p.4)**. Open Partner, pick only **Keeta**. Store must read “No stores for the selected partner”. Restaurant column must be (Poo1) . Clear filters. Pick **Americana** — Store must list stores again.
6. Click **Clear filters**. Every slicer returns to All. The efficiency drill-down (if any) also clears.

4.2 Payroll KPIs and grid — SOP pages 5–7

1. Five cards, in this order: Riders in payroll · Total active riders · Avg attendance eff. · Riders at / above 100% · Riders with unjustified days.
2. Legend colours: **12** grey, OFF green, Sick orange, Accident light green, Absent red. No Travelled and no Cancelled chips.
3. Identity columns: AM ID (employee ID), MG ID (driver code), Name, Restaurant, Zone, Partner, Nationality, Status (Active / Inactive).
4. One column per calendar day of the selected month, then Total Days, Total Hours, OFF, Sick, Accident, Absence, Fixed Days, Efficiency%.
5. Pick one rider. Total Days = count of **12**. Total Hours = Total Days × 12. Efficiency% = Total Days ÷ Fixed Days × 100 (one decimal on screen). Green at 100%+, red below 80%.
6. A future day (after Kuwait today) is blank — not Absent, not in the totals.

4.3 Efficiency and justification — SOP page 8

1. September 2026 is a 30-day month → Fixed Days **28**. August and July are 31-day months → Fixed Days **29**.
2. Efficiency is **not capped**. A rider who works more than Fixed Days reads above 100% and is counted in “Riders at / above 100%”.
3. OFF / Sick / Accident without an Approved request increment “Riders with unjustified days”. Absent does **not**.
4. A request still Pending or Under review does **not** justify the day (SOP p.15 critical note).
5. **Same-date rule**. Open August → Requests. RCM-0092 (Sick Leave 25–28 August, filed 8 September) must appear in August and must **not** appear in September. RCM-0085 (Leave 15 November–15 January, filed 4 September) must appear in **neither** September nor August.

4.4 Distribution chart and exports — SOP pages 9–11

- 1. Five bars: ≥ 100%, 90–100%, 80–90%, 70–80%, <70%. Their counts must add up to “Riders in payroll”.
- 2. Click the largest bar (usually <70%). A green banner appears: “Showing only riders in the ... bucket — N rider(s)” plus **Show all**. The table footer “Showing X of Y” must match N.
- 3. Click the same bar again — drill-down clears. Click another bar, then change month — drill-down clears.
- 4. **Download this table** (and header **Export to Excel**) saves the current view, including the drill-down. Filename `MGG0-payroll-YYYY-MM.csv` . No Travelled / Cancelled columns.
- 5. Chart **CSV** downloads every rider in the filtered month, grouped by bucket, with a Bucket column and Unjustified Days. Filename `MGG0-efficiency-distribution-YYYY-MM.csv` .
- 6. Apply Partner = Keeta, then export. The file must contain only Keeta riders — never rows you cannot see on screen (SOP p.11).

4.5 Requests tab — SOP pages 12–15

- 1. Eight tiles: Leave, Sick Leave, Accident, Asset, Fuel, Loan, Documents, Salary Justification. Red badge = Pending + Under review for that type.
- 2. Status chips: All · Pending · Under review · Approved · Rejected. Type AND status combine. Queue sorts Pending first.
- 3. Click Leave, then Pending. Only that intersection remains. Click the Leave tile again to clear the type.
- 4. Only Leave / Sick Leave / Accident justify a payroll day. Asset, Fuel, Loan, Documents and Salary Justification do not (SOP p.13).
- 5. Fuel tile includes Fuel Refunds (same Fleet queue). Accident tile is Leave-Accident **or** Sick-Leave-Accident — there is no separate Accident request type.
- 6. Row columns: Request ID, Rider, ID, Type, Day, Zone, Partner, Reviewing dept., Status. Click a row — it opens the existing request record (approve / reject / clarify stay there).
- 7. **Approval Workflow** panel (right): four SOP steps, verbatim, including “Safety & Legal” in step 3. Below the steps: **Awaiting action** and **Requests / rider** (one decimal). Changing month or a slicer updates both. Tile / status chips do **not** shrink these two numbers.
- 8. Reviewing dept. on a live row is the current approval step (Reporting Manager / HR / Payroll / Fleet), not the SOP ideal label.

5. Sanity-check numbers (Kuwait, 16 September 2026)

Captured on production after the live snapshot went in. Use them as a starting point. September figures will move as riders clock in after this date. The **same-date** request examples (RCM-0092 / RCM-0085) will not move.

	Sep 2026 (30 d / Fixed 28)	Aug 2026 (31 d / Fixed 29)	Jul 2026 (31 d / Fixed 29)
Riders in payroll / Active	861 / 861	861 / 861	861 / 861
Avg attendance eff.	15.5%	4.0%	3.2%
Riders at / above 100%	0 (mid-month — max possible is 16 / 28)	12	19
Riders with unjustified days	2	1	0

	Sep 2026 (30 d / Fixed 28)	Aug 2026 (31 d / Fixed 29)	Jul 2026 (31 d / Fixed 29)
Efficiency buckets ≥ 100 / 90–100 / 80–90 / 70–80 / < 70	— (mid-month; none at 100%)	$12 + 6 + 2 + 4 + 837 = 861$	—
Requests in month / Awaiting action	18 / 10	34 / 7	—
Partner = Keeta	861 $\rightarrow$ 157 riders	—	—

Average efficiency in September looks low because Fixed Days is the **full** month (28) while only the days up to today can show **12**, and several hundred rostered riders have never clocked in (they sit as Absent). That is the SOP formula, not a load error.

6. Three questions we need from you

1. **Travelled.** The sheet has a yellow Travelled day. There is no Travel option on the rider's leave form today. When you add one, we will paint Travelled and require an Approved leave on that date. Until then the column stays off. Is that acceptable?
2. **Cancelled / "work order cancelled".** Who marks this on the monthly sheet, in which system, and does it need a request? We will not guess from cancelled deliveries.
3. **Safety & Legal for Accident.** The workflow panel already uses your SOP wording. Live Accident rows still follow Leave / Sick Leave. Do you want a dedicated Safety & Legal step on Accident only?
